

## SUMMARY

AI Engineer with over 4 years of experience delivering innovative solutions in machine learning and natural language processing. I excel at optimizing processes to solve complex problems effectively and have a proven track record of developing scalable software solutions that meet business needs. My experience includes collaborating with diverse teams to achieve project goals and improve overall efficiency. I am dedicated to keeping up with the latest technologies to build solutions that make a real difference.

## SKILLS

|                             |                                                                                                                                                                                     |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>            | Python, Shell Script, Markdown, SQL, Java, GoLang, C#                                                                                                                               |

## PROJECTS

### AI Travel Itinerary Generation

- Designed a robust Pipeline for Itinerary Generation.
- Deployed using FastAPI to return structured itinerary components in response to Natural Language Prompt.
- Delivered a scalable and efficient solution that enhances travel planning convenience and improves user engagement.

### Speech-to-Speech Chatbot API

- A robot that can listen to your query, process it, and respond with a human-like voice.
- Designed the robot to function with OpenAI Whisper, ChatGPT API, and Text-to-Speech tools.
- The robot can retrieve and respond using custom knowledge provided to it via files with .txt, .pdf, .csv, and many more file types.

### AI Agent for generating Vendor Performance Reports

- An AI Agent that analyzes your input CSV/Excel data.
- Generates a report based on the analysis.
- Returns tabular as well as sentence reports as a PDF.

### Skill Recommendation Engine

- Applied Transfer Learning on NLP Algorithms like Word2Vec, USE, and BERT.
- Implemented an Ensemble approach to achieve a more generalized model.
- Model accuracy turned out to be 93%.
